IN THE CLAIMS

Please amend Claim 10 as follows:

1. (Original) For use in a communication network, a first object-oriented

telecommunication device capable of communicating with a second object-oriented

telecommunication device in said communication network, said first object-oriented

telecommunication device comprising:

a plurality of objects executable by processing circuitry associated with said first object-

oriented telecommunication device; and

an object conduit management information base (MIB) manager capable of gathering data

from one or more of said plurality of objects and generating therefrom a management information

base (MIB) data structure suitable for communicating with said second object-oriented

telecommunication device using a specified protocol interface.

2. (Original) The first object-oriented telecommunication device as set forth in Claim

1 wherein said specified protocol interface is Simple Network Management Protocol (SNMP).

3. (Original) The first object-oriented telecommunication device as set forth in Claim

1 wherein said MIB data structure comprises an object identifier (ID) associated with a target object

in said second object-oriented telecommunication device.

-2-

U.S. SERIAL NO.: 10/826,879

PATENT

4. (Previously Presented) The first object-oriented telecommunication device as set

forth in Claim 3 wherein said MIB data structure comprises a target method ID identifying a selected

method associated with said target object and at least one method parameter associated with said

selected method.

5. (Original) The first object-oriented telecommunication device as set forth in Claim

4 wherein said object conduit MIB manager comprises an interface controller capable of

communicating with said one or more of said plurality of objects and gathering said data from said

one or more of said plurality of objects.

6. (Original) The first object-oriented telecommunication device as set forth in Claim

1 wherein said object conduit management information base (MIB) manager is further capable of

receiving a response MIB data structure from said second object-oriented telecommunication device,

extracting data from said response MIB data structure, and distributing said extracted data to said

one or more of said plurality of objects.

7. (Original) For use in a communication network, a first object-oriented

telecommunication device capable of communicating with a second object-oriented

telecommunication device in said communication network, said first object-oriented

telecommunication device comprising:

-3-

U.S. SERIAL No.: 10/826,879

PATENT

a plurality of objects executable by processing circuitry associated with said first object-

oriented telecommunication device; and

an object conduit management information base (MIB) agent capable of receiving a

management information base (MIB) data structure from said second object-oriented

telecommunication device using a specified protocol interface, extracting data from said received

MIB data structure, and distributing said extracted data to one or more of said plurality of objects.

8. (Original) The first object-oriented telecommunication device as set forth in Claim

7 wherein said specified protocol interface is Simple Network Management Protocol (SNMP).

9. (Original) The first object-oriented telecommunication device as set forth in Claim

7 wherein said MIB data structure comprises an object identifier (ID) associated with a target one

of said one or more of said plurality of objects in said first object-oriented telecommunication device.

10. (Currently Amended) The first object-oriented telecommunication device as set forth

in Claim 9 wherein said MIB data structure comprises a method name target method ID identifying

a selected method associated with said target object and at least one method parameter associated

with said selected method.

-4-

U.S. SERIAL No.: 10/826,879

PATENT

11. (Original) The first object-oriented telecommunication device as set forth in Claim

10 wherein said object conduit MIB agent comprises an interface controller capable of

communicating with said one or more of said plurality of objects and distributing said extracted data

to said one or more of said plurality of objects.

12. (Original) The first object-oriented telecommunication device as set forth in Claim

7 wherein said object conduit MIB agent is further capable of gathering data from said one or more

of said plurality of objects and generating therefrom a response management information base (MIB)

data structure suitable for communicating with said second object-oriented telecommunication

device using said specified protocol interface.

13. (Original) A communication network comprising:

a first object-oriented telecommunication device capable of communicating with a second

object-oriented telecommunication device in said communication network, said first object-oriented

telecommunication device comprising:

a plurality of objects executable by processing circuitry associated with said first

object-oriented telecommunication device; and

an object conduit management information base (MIB) manager capable of gathering

data from one or more of said plurality of objects and generating therefrom a management

-5-

U.S. SERIAL NO.: 10/826,879

PATENT

information base (MIB) data structure suitable for communicating with said second object-

oriented telecommunication device using a specified protocol interface.

14. (Original) The communication network as set forth in Claim 13 wherein said

specified protocol interface is Simple Network Management Protocol (SNMP).

15. (Original) The communication network as set forth in Claim 13 wherein said MIB

data structure comprises an object identifier (ID) associated with a target object in said second

object-oriented telecommunication device.

16. (Previously Presented) The communication network as set forth in Claim 15 wherein

said MIB data structure comprises a target method ID identifying a selected method associated with

said target object and at least one method parameter associated with said selected method.

17. (Original) The communication network as set forth in Claim 16 wherein said object

conduit MIB manager comprises an interface controller capable of communicating with said one or

more of said plurality of objects and gathering said data from said one or more of said plurality of

objects.

-6-

U.S. SERIAL No.: 10/826,879

PATENT

18. (Original) The communication network as set forth in Claim 13 wherein said object

conduit management information base (MIB) manager is further capable of receiving a response MIB

data structure from said second object-oriented telecommunication device, extracting data from said

response MIB data structure, and distributing said extracted data to said one or more of said plurality

of objects.

19. (Original) The communication network as set forth in Claim 13 wherein said second

object-oriented telecommunication device comprises:

a plurality of objects executable by processing circuitry associated with said second object-

oriented telecommunication device; and

an object conduit management information base (MIB) agent capable of receiving said

management information base (MIB) data structure from said first object-oriented

telecommunication device, extracting data from said received MIB data structure, and distributing

said extracted data to one or more of said plurality of objects.

20. (Original) The communication network as set forth in Claim 19 wherein said

specified protocol interface is Simple Network Management Protocol (SNMP).

-7-

U.S. SERIAL No.: 10/826,879

PATENT

21. (Original) The communication network as set forth in Claim 19 wherein said MIB

data structure comprises an object identifier (ID) associated with a target one of said one or more of

said plurality of objects in said first object-oriented telecommunication device.

22. (Previously Amended) The communication network device as set forth in Claim 21

wherein said MIB data structure comprises a target method ID identifying a selected method

associated with said target object and at least one method parameter associated with said selected

method.

23. (Original) The communication network as set forth in Claim 22 wherein said object

conduit MIB agent comprises an interface controller capable of communicating with said one or

more of said plurality of objects and distributing said extracted data to said one or more of said

plurality of objects.

24. (Original) The communication network as set forth in Claim 19 wherein said object

conduit MIB agent is further capable of gathering data from said one or more of said plurality of

objects in said second object-oriented telecommunication devices and generating therefrom a

response management information base (MIB) data structure suitable for communicating with said

first object-oriented telecommunication device using said specified protocol interface
